The UNFOLDER® Platinum 1 Series Implantation System is used to fold and assist in inserting TECNIS® 1-Piece Intraocular Lenses (IOLs), only into the capsular bag.

Designed for the micro-implantation procedure and compatible across the full range of acrylic TECNIS® 1-Piece IOL Diopters.

UNFOLDER® PLATINUM 1 SERIES INSERTER

MODEL NUMBER: 1MTEC30

EASY TO LOAD.
EASY TO USE.

UNFOLDER® PLATINUM 1 SERIES HANDPIECE

PRECISE, CONTROLLED DELIVERY, TIME AFTER TIME.
LOADING THE DELIVERY SYSTEM

LENS INSERTION

- Insert the cartridge bevel down into the incision and slowly advance the plunger into the cartridge.

- Rotate the knob to advance the plunger and push the lens forward. Ensure that the rod tip engages the lens optic body and remains behind the optic body through the entire delivery.

- Slowly advance the lens, ensuring the haptics remain tucked over the optic, until the lens is fully released from the cartridge tube.

- Slowly reverse screw knob to withdraw the plunger.
ATTENTION
Reference the labeling for a complete listing of Indications and Important Safety Information.

INDICATIONS
The Model DK7796 Handpiece is used in combination with the Model 1MTEC30 Cartridge to fold and assist in inserting AMO Acrylic 1-Piece Intraocular Lenses, ONLY into the capsular bag.

CONTRAINDICATIONS
Do not use the handpiece if the rod tip appears nicked or damaged in any way.

WARNINGS
The UNFOLDER® Platinum 1 Series Implantation System should be used ONLY with AMO Acrylic 1-Piece IOLs. Do not use if the cartridge tip is cracked or split prior to implantation. Never release the plunger until the optic body has been completely released from the cartridge tube. The lens and cartridge should be discarded if the lens has been folded within the cartridge for more than 5 minutes. If the IOL is not properly placed in the cartridge, the IOL may be damaged and/or implanted upside down. Do not attempt to modify or alter this device or any of the components, as this can significantly affect the function and/or structural integrity of the design. Use of methyl cellulose viscoelastics is not recommended as they have not been validated with the Model 1MTEC30 Cartridge and AMO acrylic 1-Piece IOLs. Do not implant lens if rod tip becomes jammed in the cartridge. AMO single-use medical devices are labeled with instructions for use and handling to minimize exposure to conditions which may compromise the product, patient, or the user. The reuse/resterilization/reprocessing of AMO single-use medical devices may result in physical damage to the medical device, failure of the medical device to perform as intended, and patient illness or injury due to infection, inflammation, and/or illness due to product contamination, transmission of infection, and lack of product sterility.

PRECAUTIONS
The use of viscoelastics is required when loading the IOL into the cartridge. For optimal performance use the AMO HEALON® Family of Viscoelastics. Do not use balanced salt solution. The combination of low operating room temperatures and high IOL diopter powers may require a slower delivery. Do not use if any component of the UNFOLDER® Platinum 1 Series Implantation System has been dropped or inadvertently struck while outside of the shipping case. Do not store the cartridges at temperatures under 41°F or over 86°F.
